

Deborah McNelis is one of the most innovative educators in early learning. She works passionately to achieve the best possible outcome for all children because she believes that EVERY child has potential! As the founder of Braininsights she is the resident guru on how a child's brain develops. She has devoted her life to help spread awareness among parents and educators.

Deborah is one of those people who can make you excited to learn and get involved. Her passion for educating people on the importance of early brain development is contagious. Her creation of the phenomenal brain development activity packets (Zero to five) are exactly what parents, child care providers, students, and anyone else working with young children needs.

It is Deborah's belief that every child has great potential that can be reached when we all have a comprehension of how children's brains develop. With the experience of being a parent, a bachelor's degree in Early Childhood Education, and an MS in Adult Education, she has devoted her life to developing programs and materials that create insights into the difference we can all make.

Brain Insights

Saturday
August 28, 2010
Cottonwood Inn
Glasgow
8:00-3:00

This project is funded (in part) under contract with MT Department of Public Health and Human Services. The statements herein do not necessarily reflect the opinion of the Department.

With the intention of making the presentations on early brain development enlightening and yet easy, all of the information is based on the basics of scientific research..

Deborah's aim is to generate learning through the use of a variety of presentation methods. She delivers the information in a way that creates understanding and inspiration for the impact we can all have on young children's brains. Through the use of handouts, slides, and fun interactive activities the brains of the participants are activated. She is a passionate speaker who makes knowledge about the brain interesting while creating an enthusiasm to learn more and a desire to share the experience with others.

Participants will receive a review of the basics of brain development and gain insights into how we can have a positive impact on the brain in the early years. Deborah also simplifies this very complex organ by relating information we will understand about child development and how what we do everyday applies to the children we are working with. Deborah will also emphasize that brain development does not stop at the age of three so those preschool and early years in school are so very important to make real learning take place. Finally she will address how stress affects relationships and also learning. This will address those of us who are working with 'at risk children. She will also bring into the session working with hard to reach parents.

Saturday August 28, 2010 Cottonwood Inn—Glasgow

Registration Opens 8:00 am

- 9:00** Session 1 Creating Great Connections:
Information Everyone Should Know
- 10:00** Session 2 Brain Development:
